

IS YOUR SHELL **GREEN?**

ENVIRONMENTALLY FRIENDLY

When it comes to being environmentally friendly, Thermo-Kool is always considering new, alternatives to create a more eco-friendly product. This includes switching our blowing agent to R-1233zd, which is a non-flammable replacement for R-123 with an ultra-low Global Warming Potential of 1. That's 99.9% lower than R-245fa, making it an environmentally preferable alternative. In addition, Thermo-Kool uses recycled materials in the manufacturing process.

ENERGY EFFICIENT

Meets 2024 Energy Standards and California Code of Regulations
